1.Conditional rule schema

Objective

To define a rule-based system in which one form field can control the visibility or behaviour of another field based on a specific condition.

Description

A conditional rule describes how one field controls another field. Each rule contains a trigger/source field, an operator, a comparison value, a target field and an action.

Rule Components

- Trigger / Source Field
- Operator
- Expected / Comparison Value
- Target Field
- Action

The image shows a 'Field Settings' form with a dark theme. On the left, there are fields for 'Label' (with a placeholder 'Add your Question'), 'Placeholder' (with a placeholder 'option placeholder'), a 'Required' checkbox, and a list of 'Options' (Option 1, Option 2, Option3) with an 'Add Option' button at the bottom. On the right, a 'Conditional Logic' panel is open, containing a dropdown for 'IF Field' (with a placeholder 'Select Field'), a dropdown for 'Condition' (with a placeholder 'Equals'), a text input for 'Value' (with a placeholder 'Example: Yes'), and a dropdown for 'Action' (with a placeholder 'Show').

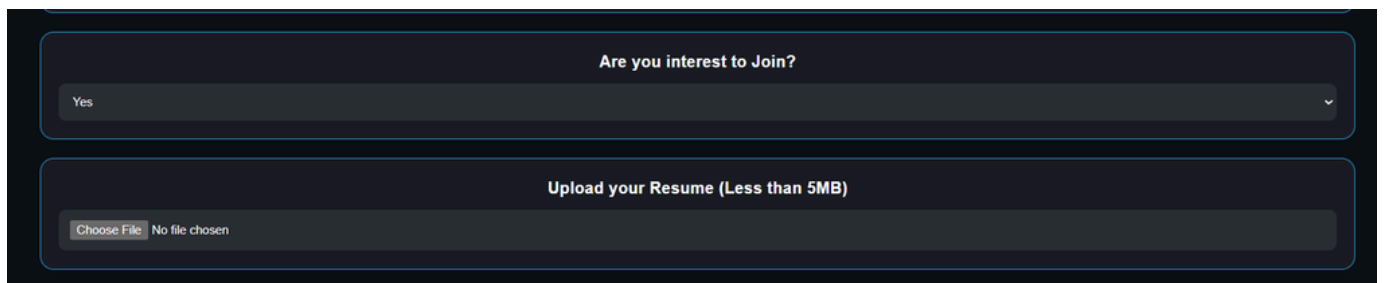

2.Conditional Logic Evaluator

Objective

To evaluate the configured conditional rules and dynamically determine whether a target field should be shown or hidden based on the user's response

Description

When the user interacts with the public form, the system checks the configured rules against the user's responses. If the condition is satisfied, the corresponding action is performed.

Enter your Answer

3.Server-Side Validation

Objective

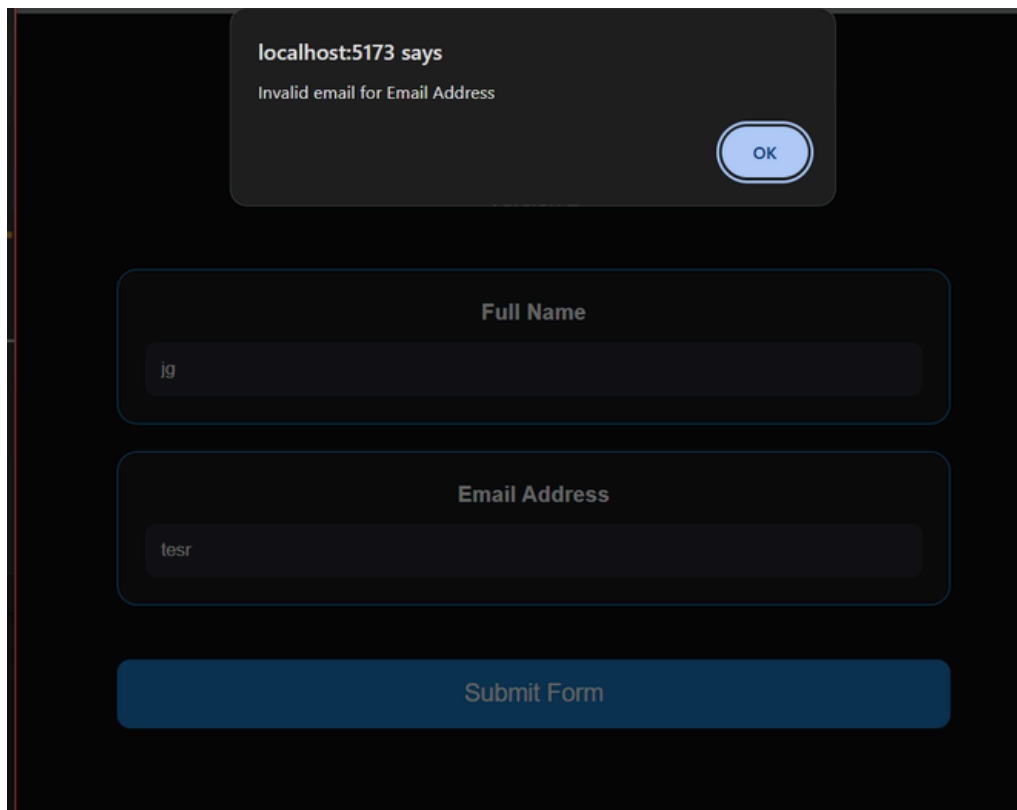

To ensure that all submitted data satisfies the validation rules configured for each field before accepting the submission.

Description

The backend validates the submitted values using the field configuration created while building the form.

The system validates:

- Email format
- Number range
- Minimum and maximum length
- Date validity
- Dropdown values
- File-related validation
- If validation fails, the submission is rejected.

The screenshot shows a dark-themed web form. At the top, a dark gray notification box contains the text "localhost:5173 says" and "Invalid email for Email Address", with a blue "OK" button. Below this, the form has two input fields. The first field is labeled "Full Name" and contains the text "jg". The second field is labeled "Email Address" and contains the text "tesr". At the bottom of the form is a blue button labeled "Submit Form".

localhost:5173/form/28ee6188-cf16-4247-bcc0-ccdb16bebcc1

localhost:5173 says
Phone Number must contain exactly 10 digits

OK

Full Name

Jnanasree

Phone Number

99999

Submit Form

localhost:5173 says
Date of Birth must be on or after 2026-01-01

OK

Date of Birth

01-01-2005

Submit Form

4.Submission Handler

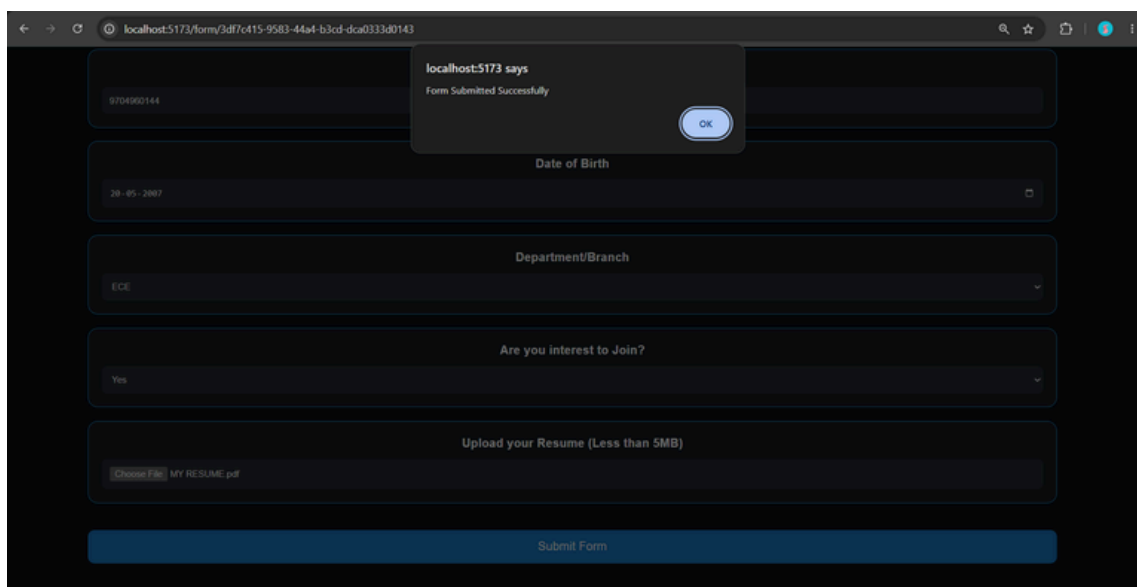

Objective

To securely process a user's form submission, validate the submitted data, apply conditional rules and store the valid responses in the database.

Description

Submission flow:

1. Receive submitted data.
2. Find the published form version using UUID.
3. Load the form schema.
4. Validate fields.
5. Apply conditional rules.
6. Create a submission record.
7. Store every response.
8. Generate a unique response ID.
9. Return a success response.

The screenshot shows a web browser window with the address bar displaying 'localhost:5173/form/3df7c415-9583-44a4-b3cd-dca0333d0143'. A dark-themed form is visible with several input fields. A modal dialog box is open in the center, displaying the message 'localhost:5173 says Form Submitted Successfully' with an 'OK' button. The form fields include a text input with the value '9704960144', a date input with the value '28-05-2007', a dropdown menu with the value 'ECE', another dropdown menu with the value 'Yes', and a file upload section labeled 'Upload your Resume (Less than 5MB)' with a 'Choose File' button and the text 'MY RESUME.pdf'. At the bottom of the form is a 'Submit Form' button.

5.File Upload Handling

Objective

To allow respondents to upload files through File Upload fields and associate the uploaded file with the corresponding submission and field.

Description

When a form contains a File Upload field, the uploaded file is received along with the submission. The system stores the file and maintains its reference against the corresponding submission

Form Responses

Submission #78

Version : 2

Submitted : 2026-08-13T17:03:03.554137Z

Field	Answer
Full Name	Jnanasree Gadu
Student ID	24P31A0481
Email Address	jnanasreegadu13@gmail.com
Phone Number	9704960144
Date of Birth	2007-05-20
Department/Branch	ECE

Upload your Resume (Less than 5MB)	MY RESUME.pdf

6.Module 2 Output

Objective

To produce a complete and structured set of form and submission data that can be consumed by the next module.

Description

At the end of Module 2, the database contains:

- Form
- Form Version
- Fields
- Conditional Rules
- Submissions
- Response Values
- Uploaded File References
- Response IDs
